

Reducing Time to Market with the PaaS Cloud of the Future

Jose Luis Vazquez-Poletti

Distributed Systems Architecture Research Group
Complutense University of Madrid
Spain

Abstract. Cloud computing is essentially changing the way services are built, provided and consumed. Despite simple access to Clouds, building elastic services is still an elitist domain and proprietary technologies are an entry barrier especially to SMEs and consequently, it remains largely within the domain of established players. This talk will explain how the 4CaaS project will bring significant benefits to the European economy, by providing an easy to use Infrastructure for a More Competitive Environment, greatly simplifying design and delivery of tailored services and compositions.
